

Biblioscape

Visualize scientific landscape

Brainstorming session - 17/04/2026

Inspiration

[Explore](#) or [Watch the video](#)

Aim

- Visualize the scientific landscape covered by a project / program / research institute
- Facilitate the identification of possible reviewers for articles / calls / members of scientific council

Existing tools

Before developing a new tool,
it is worth testing out the existing tools.

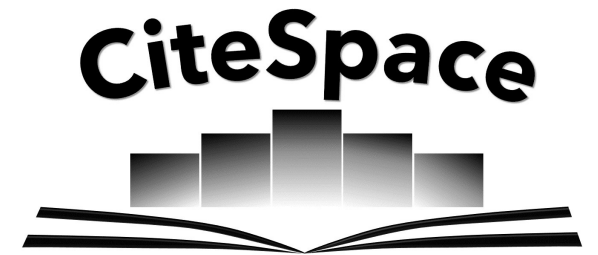

<https://www.bibliometrix.org>

R package with shinyapp
very complete
good inspiration

<https://www.vosviewer.com>

based on Java
nice network visualization
fast, efficient, and clear

<https://citespace.podia.com>

65 USD (used to be free)
only for Windows and Mac

but good references:
[10.1371/journal.pone.0223994](https://doi.org/10.1371/journal.pone.0223994)

Other tools / review

- [BiblioTools / BiblioMaps](https://sebastian-grauwin.com/XYZ_ENSL/bibliomap_corpusdescription.html), from Sébastien Grauwin, ENS Lyon 2018
https://sebastian-grauwin.com/XYZ_ENSL/bibliomap_corpusdescription.html
- [Open Knowledge Maps](https://github.com/OpenKnowledgeMaps/Headstart) from Peter Kraker, Wien
not really usefull, cluster of most relevant papers
<https://github.com/OpenKnowledgeMaps/Headstart>
- [Scimat](#), runs on Java, from Cobo et al. 2013, Univ. Granada
- [CorText](#), made by INRAE, need registration
- [ScanR](#), from recherche.gouv.fr for French research only, based on VOSviewer

Review of existing tools:

- González-Alcaide, G. (2021). Bibliometric studies outside the information science and library science field: uncontrollable or uncontrollable?, *Scientometrics*, 1-34.
- Bales, M. E., Wright, D. N., Oxley, P. R., & Wheeler, T. R. (2020). Bibliometric visualization and analysis software: State of the art, workflows, and best practices.

Needed features

- Input

List of publications

or

List of authors

– grouped by project

- Reference databases

OpenAlex

CrossRef

? other ?

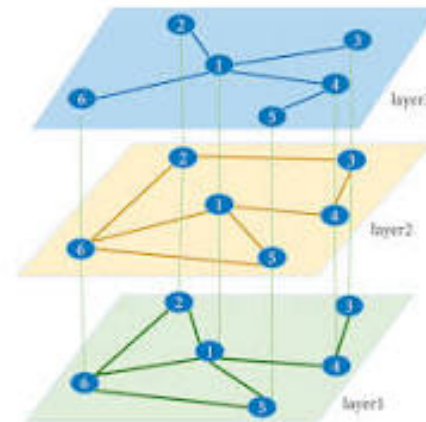

- Output

Network of co-authorship

Network of citations

Network of keywords ?

As a multi-layered network?

Database set-up

RG_MEMBER
(optional)
orcid
project
relation
(PI/member)

Steps

- Data gathering
 - Fill in DB from DOI / title+years
 - Fill in DB from ORCID / authors
 - Look for additional references / authors? Snowball search?*
- Network visualisation
 - Visualize citation network
 - Visualize co-authorship networks
 - Visualize multi-layer network?*

Timeline

- Test with MTE bibliographic data
 - Complete the list of articles in calls + final reports + output RF, May 26
 - Try to create a initial database RF, June 26
 - Explore network visualization on the database RF, Summer 26
 - Explore Bibliometrix + VOSviewer output RF, June 26
- Test with CESAB bibliographic output? Scientific council?
- Create a proper R-package?
